

Company "Aksida" operates since 1953. It was reorganized in 2009 and now it has a status of Social Enterprise for disabled and handicap people. It is a production company with 95 employees. 84 of them have different types and levels of disability or activity limitations: visual disability, hearing disability and other invisible disabilities that accrue because of different illnesses: spine, joints, cancer, stomach or other body diseases.

This company is mostly oriented to provide jobs for people with different levels of visual disability, but we have also very good production people that can work as well as people without disability and even better sometimes. Our Government has a support system for that kind of companies.

We have two types of activities.

- We produce **our own products**: crown caps for beer bottles, wooden and plastic clothes pegs, old fashion curtain clips;

- We also **provide services**:
  - o we assemble legs for height adjustable tables for Swedish company ROL branch in Lithuania;
  - o we put thoughtrobe-handles for gift bags;
  - o we do wiring for small electrical appliances and lighting products are for Lithuanian-Swedish venture Artilux NMF Ltd. We can read technical drawings!

We could do almost everything:

- assembling -wires, furniture, carton boxes, pallets and etc.
- preassembling for almost any kind of production.
- Sorting – color and/or size difference.
- Packing.

We also are opened for any kind of cooperation options including start up totally new type of production.

*We do not ask for charity! We want to earn money ourselves by being useful to our partners and colleges!*
